Serial No.:

09/432,820

Filing Date:

2 November 1999

Please amend claim 24 and claim 25 as follows:

24. A method of detecting the presence of antibodies to virulent Mycobacterium in a biological sample, said method comprising:

combining said sample with a protein having the amino acid sequence of SEQ ID NO:2, a homolog thereof or an antigenic determinant thereof; and detecting antibodies bound to said protein.

25. The method of Claim 24, wherein said virulent Mycobacterium is selected from the group consisting of M. bovis, M. tuberculosis, M. leprae, M. africanum, M. microti, M. avium, M. intracellulare and M. scrofulaceum.

Please add the following new claim:

50. (New) A method of detecting the presence of antibodies to a virulent Mycobacteriam in a biological sample, said method comprising:

combining said sample with a purified protein of a mycobacterium other than M. bovis BCG, wherein said protein

is a homolog of the protein of SEQ ID NO:2;

is an immunogenic membrane-associated protein of said mycobacterium; and is encoded by DNA which is capable of hybridizing with a DNA probe having the complete sequence represented in SEQ ID NO: 1 under conditions where, on a Southern blot, said probe will identify single 3.25 kb BamHI fragments from *M. bovis* BCG and *M. tuberculosis* H37Rv DNA, but will not hybridize with BamHI-digested DNA from either *M. smegmatis* or *M. vaccae*.
